WELCOME TO **Conval**^{Inc.}

Conval has designed and manufactured high-pressure, high-temperature forged steel valves for the world's most **demanding** applications for over 45 years. One of Conval's guiding principles is selecting, cultivating, and serving the needs of our markets with innovative and technologically-advanced products. In order to achieve this high degree of excellence, we have set up a Quality System that ensures compliance to requirements. Conval was ISO 9001 Certified on Sept. 11, 1992. We also comply to Appendix B of 10 CFR 50, the Crosby Quality program, N-stamp certifications, the European PED, IBR and many other standards.

Conval valves and accessories are in service with customers around the world. That's why Conval has stocking representatives on every continent. For your convenience, there is a complete, up-to-date list of representatives and regional managers on our website, Conval.com. We look forward to being of service to you soon.

Why CLAMPSEAL® Valves are Top Performers in Their Class

Versatility

CLAMPSEAL® valves are tailored to the exact requirements of our customers. No other premium forged valve offers so many options. Conval provides three body styles in various pressure classes and five standard materials. Other materials are available to meet customer needs. The easy interchangeability of parts means that an entire plant installation can be supported with a very low parts inventory.

Performance

Our customers demand a valve that does the job well with little attention. The CLAMPSEAL® valve is that valve. Over 45 years of service in the most demanding applications have established the CLAMPSEAL® valve as the top performer in its class and the easiest to service.

Valve Quality

The cost of plant shutdown time to repair or replace valves far exceeds the cost of equipment. Features such as electroless nickel plated finish and complete material traceability of all wetted parts and yoke instantly establish the quality of the CLAMPSEAL® valve. In fact, parts for valves built 45 years ago are interchangeable with parts built today.

Service

The CLAMPSEAL® valve is only part of the service program which attends to the continued needs of our valued customers. Conval representatives and regional managers are selected and trained to provide the necessary support to assure complete satisfaction. Seminars are available at your plant at no cost.

Total Life Cycle Value

Based on user experience, most OEM valves simply cannot perform in highly demanding circumstances. Time and experience have shown that these inferior valves only last 4-5 years or less. By comparison, where Convals were specified and installed, typical valve life is five to ten times longer. Conval is the smartest, most economical valve choice from a total life cycle standpoint.

Two-Year Warranty

Conval is committed to unsurpassed quality. We are so confident of the quality of our product, that we offer a two-year warranty.

A Wide Conval Product Line

Standard Sizes

1/2" through 3" (4" reduced port)

Valves may also be supplied to metric dimensions.

Pressure Ratings(ASME)

Nominal: 900/1500/2500/4500

Intermediate: 1195/2155/3045

Blowdown / Letdown Valves

Five styles include single orifice continuous blowdown, unit tandem blowdown, Whisperjet blowdown, dual range valve for greater turndown and variable trim for fine control. Valves suitable for steam drains or any high pressure letdown service.

Gate Valves

Unique Swivdisc flex wedge gate for positive seat tightness. Anti-galling gate guiding, pressure seal bonnet, one piece gland with integral gland wrench.

Strainers

Simple and rugged with wide range of strainer element hole sizes. Socket blowoff connection or integral blowoff valve option available on all sizes.

Optional Valves

Adaptable to many on-line serviceable variations, including 3-way service, cryogenic service, bellows stem seal or leakoff features.

Standard Accessories

Actuators - electric, pneumatic or hydraulic

Locking Device - open, closed, or both

Limit Switch - single or dual

Stem Shroud

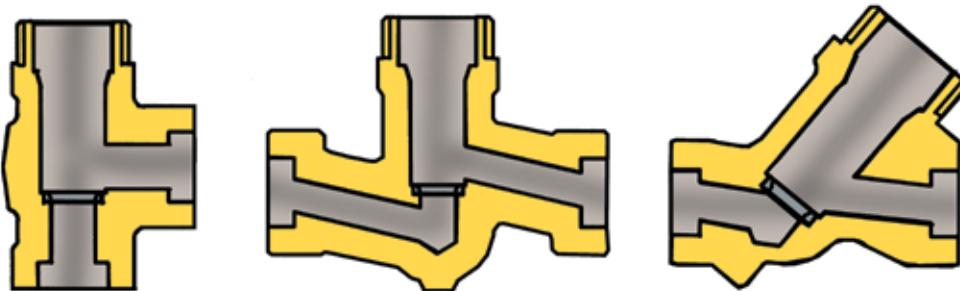

Position Indicator

Globe, Piston Check and Stop Check valves, Y, Angle and T pattern body styles all feature forged body and yoke; pressure seal bonnets with integral backseat and cartridge packing chambers; one piece packing gland with integral gland wrench; solid Stellite™ seat and disc/piston; and Electroless Nickel plate finish on Carbon Steel and Low Alloy valves.

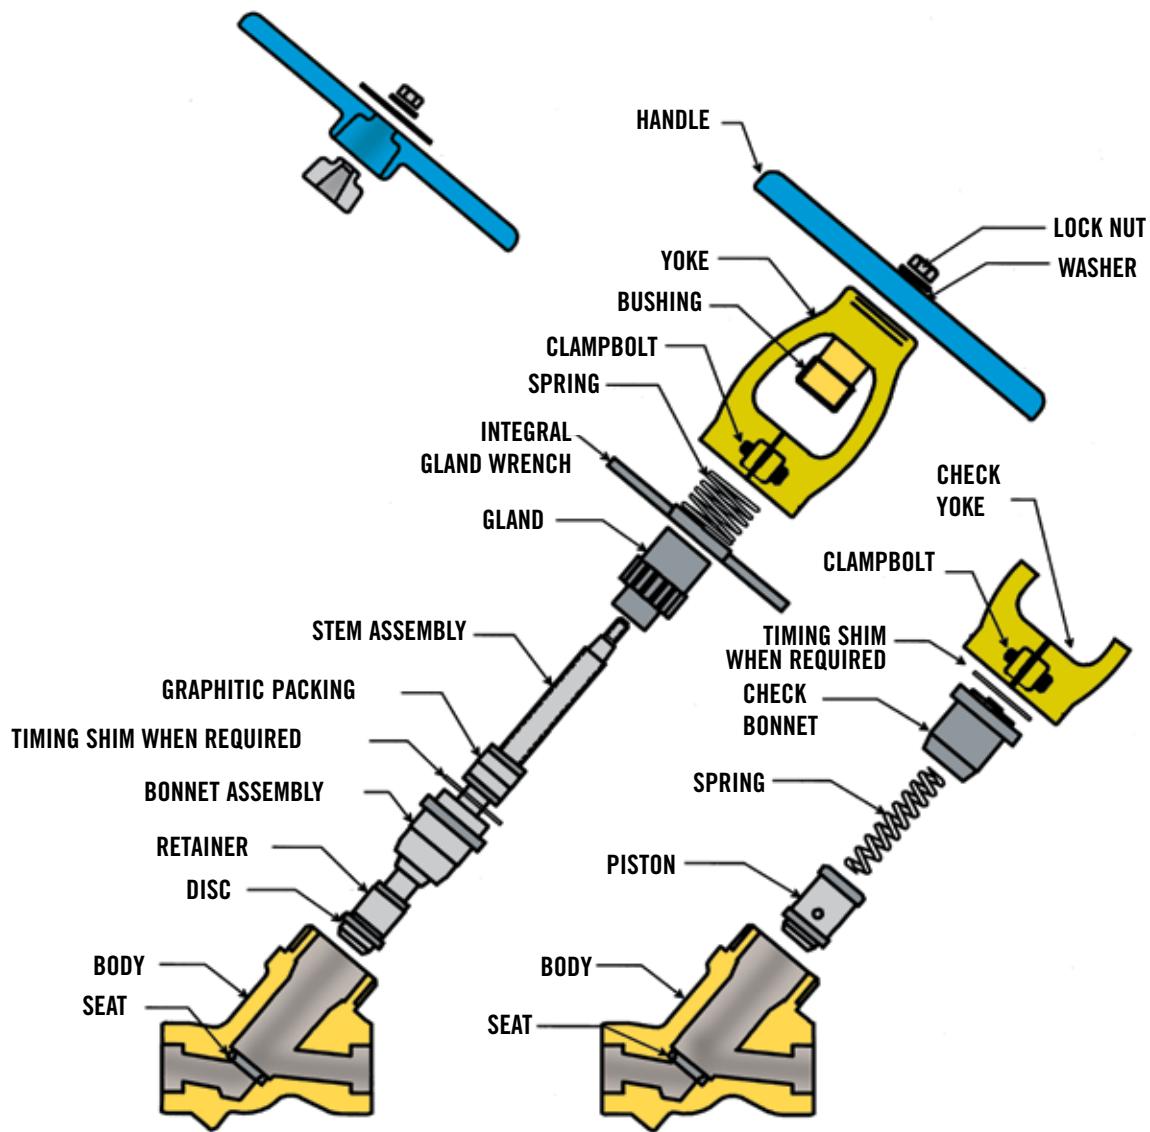

End Prep		
Type	Standard	Special
Sockets Weld	1/2" - 2"	2 1/2"
Butt Weld	2 1/2" - 4"	1/2" - 2"
Threaded	1/2" - 1"	1 1/2" - 2"
Clamp	1/2" - 3"	4"
Flanges		All Sizes

Materials (Body and Yoke)		
Type	Standard	Special
Carbon Steel	SA 105 WCB (Gate Valve)	A350-LF2

VALVES WITH SIZE CODE 8, 9 or 10
HAVE HANDWHEEL & ADAPTOR (IMPACT HANDWHEEL)

The Most Advanced Forged Steel Valve Available

Axial Design

The axial design of CLAMPSEAL® valves ensures tight concentricity. This feature is critical for superior valve performance. Concentricity eliminates side loading of the packing and minimizes wear forces on the trim components.

High Performance Packing System

The CLAMPSEAL® packing system incorporates corrosion-inhibited, high density graphitic packing. An optional LIVE LOADED GLAND system maintains packing loads for long periods without routine maintenance adjustments. Uniform loading from the axial one-piece gland and the highly polished stainless steel stem and stuffing box ensure a tight seal between packing material and sealing surfaces.

Integral Gland Wrench – I.G.W.

The Integral Gland Wrench makes packing adjustments simple, no tools required.

Clampseal® Bonnet/Chamber

A secure, leak proof bonnet allows rapid access to valve trim for inspection and maintenance. The pressure boundary is sealed at the smallest diameter possible to ensure maximum strength, low stress and minimum weight.

Pressure Actuated Backseat

The pressure actuated backseat provides maximum valve integrity by ensuring a positive internal stop for the valve stem and disc assembly while extending packing life by securely isolating the packing from line pressure when the valve is fully open.

Modular Body Styles

Three interchangeable body styles, Y, ANGLE and T-PATTERN use identical replacement trim parts to lessen your tool and inventory costs. Solid cobalt alloy seats provide high erosion resistance and repeatable in-line resurfacing (Cobalt free alloys are also available).

Rapid In-Line Repairability

The CLAMPSEAL® Valve line provides a modular solution to rising maintenance expense. Rapid, reliable in-line repairs make for less down time. This feature cuts man hours and man-REM exposure in nuclear environments.

Conval Packing System

The CLAMPSEAL® packing system utilizes proven, corrosion-inhibited, graphite packing. The packing is uniformly loaded with a one-piece gland. The stuffing box and stem are burnished stainless steel to ensure a tight seal between the system fluids and sealing surfaces.

The packing seal in any valve is inherently vulnerable. Normal packing shrinkage, frictional and pressure forces, and improper or neglected adjustment all contribute to packing deterioration. In an effort to maximize packing life, several innovative features have been incorporated in the CLAMPSEAL® design.

- **Single Piece Gland** insures uniform packing compression and eliminates the potential for stem damage from gland cocking.

- **Surface Finishes and Close Tolerances** of stem and chamber provide optimal sealing surfaces and minimize wear.

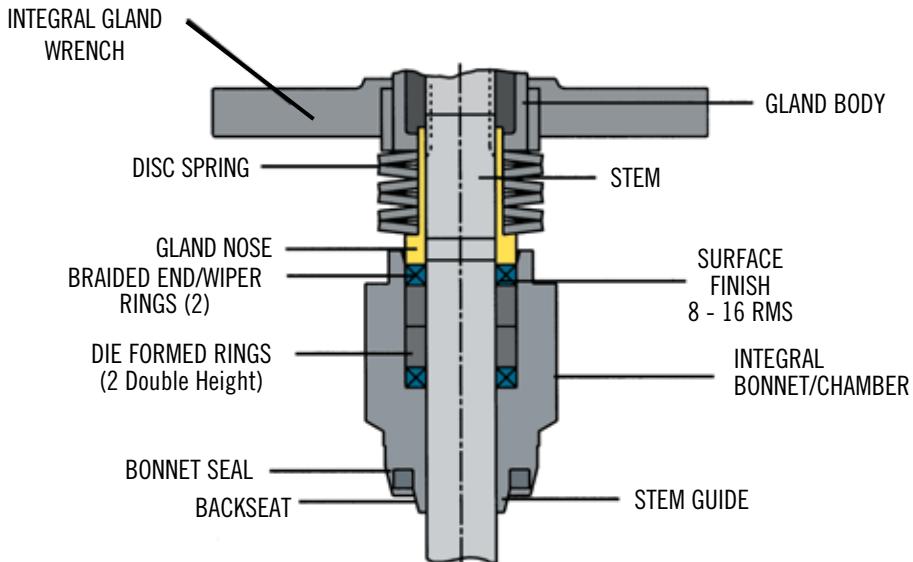

- **Narrow Packing Rings** reduce the effect of packing shrinkage, thereby reducing the frequency of packing gland adjustment. Since force = pressure x area ($F = P \times A$), by keeping the packing area to a minimum, there is less force being exerted by the system fluid, making it easier to contain.

- **Integral Gland Wrench**, standard on all CLAMPSEAL® globe and gate valves, provides immediate gland/packing adjustment capability.

- **Pressure Seal Backseat** increases packing life and provides maximum valve integrity by ensuring a positive internal stop for the valve stem and disc assembly, securely isolating packing from line pressure when valve is fully open.

- **Cartridge Type Packing Chamber** with secure, leak-proof bonnet allows rapid access to valve trim for inspection and maintenance. Pressure boundary is sealed at the smallest diameter possible to ensure maximum strength and low stress.

- **Thermal Isolation** of the packing chamber increases packing life. The Stainless Steel packing chamber is a separate unit from the body and therefore, eliminates the need to remove or change packing after stress relieving.

Optional Live Loaded Gland feature shown with the CLAMPSEAL® valve.

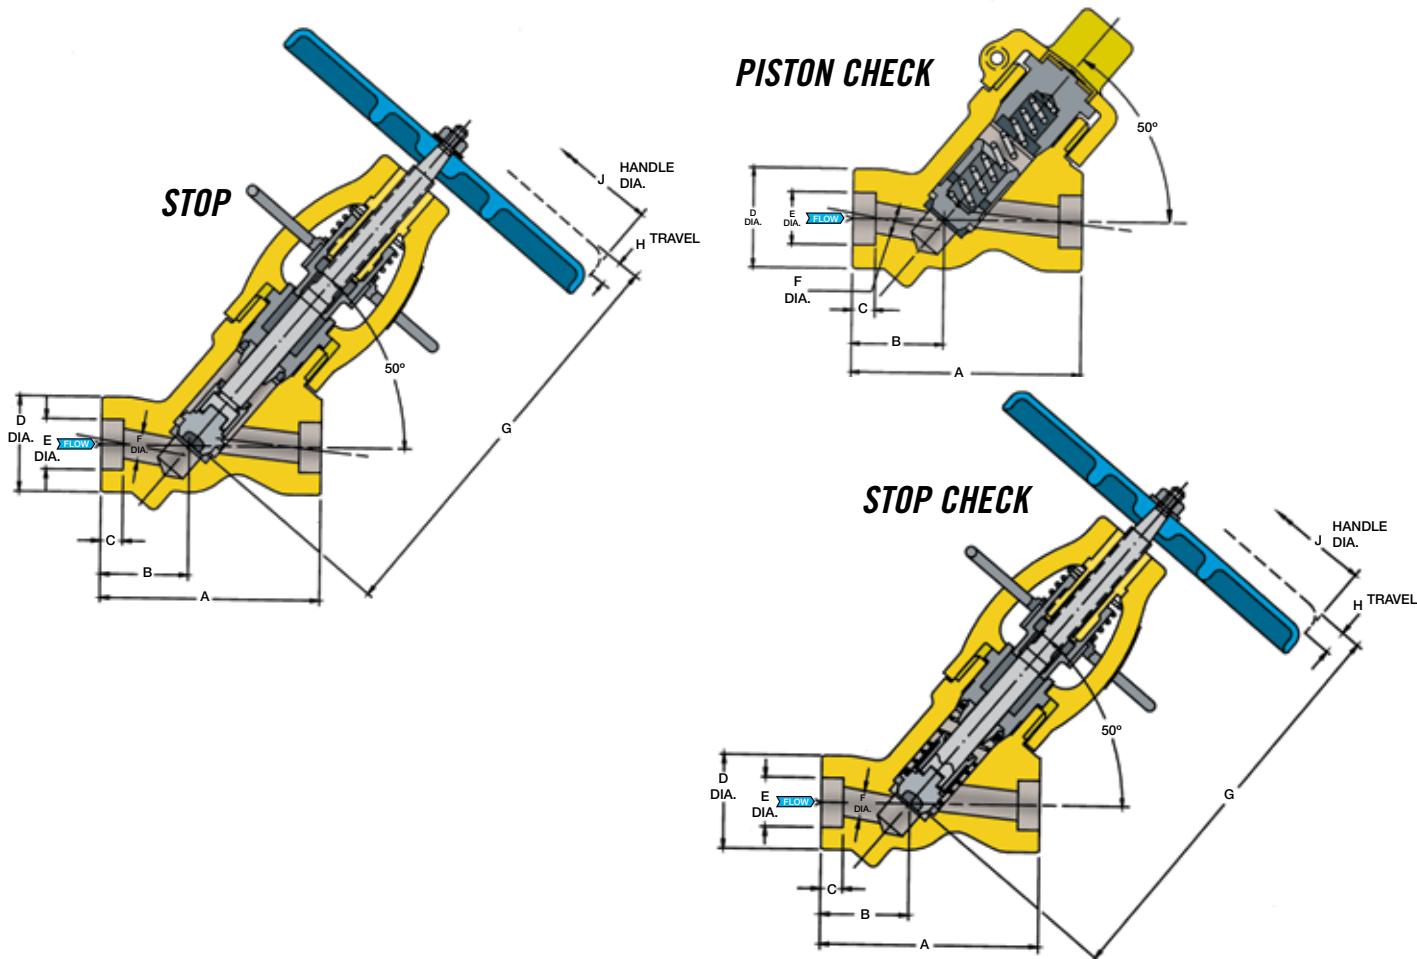

NOTE: TO ENSURE PROPER PACKING INTEGRITY, REFER TO CONVAL SERVICING INSTRUCTIONS FOR APPROPRIATE GLAND TORQUES BEFORE INSTALLING A REPAIRED VALVE IN-LINE.

See product brochure for more details.

Y-Globe Stop, Check and Stop Check Valves

Y-pattern globe valves provide the maximum Cv possible in a globe valve. All Y-pattern valves are rodable. Available in 1/2" to 4"; ASME pressure classes through 4500; A105, F22, F91, F316, F347, Inconel™, Monel™ and other materials.

T-Pattern Stop Valves, Also Available in Check and Stop Check Valves

T-pattern, vertical stem globe valves provide easily accessible stems and extinctions for remote manual operation. Available in 1/2" to 3"; ASME pressure classes through 4500; A105, F22, F91, F316, F347, Inconel™, Monel™ and other materials.

* Socket Weld dimensions shown; Consult factory for Butt Weld dimensions.

Numbers shown in Black indicate dimensions in inches, weight in pounds. Numbers shown in blue indicate dimensions in mm, weights in kilograms.

Threaded end valves are nominal ASME B16.34 rated. Consult factory for other ratings.

NOTE: All weights are approximate for shipping purposes only. Information on Figure Number Variations can be found on page 29.

Conval valves are being specified and installed for vents, drains, shut-off and blowdown service all over the world on power plants ranging from clean coal, combined cycle, solar to nuclear.

Angle Stop Valves, Also Available in Check and Stop Check Valves

Angle pattern globe valves economically eliminate the need for separate valves and 90° joints. They also reduce the number of installation welds.

Available in 1/2" to 4"; ASME pressure classes through 4500; A105, F22, F91, F316, F347, Inconel™, Monel™ and other materials.

* Socket Weld dimensions shown; Consult factory for Butt Weld dimensions.

** End to end may vary.

Numbers shown in Black indicate dimensions in inches, weight in pounds. Numbers shown in Blue indicate dimensions in mm, weights in kilograms.

Threaded end valves are nominal ASME B16.34 rated. Consult factory for other ratings.

NOTE: All weights are approximate for shipping purposes only. Information on Figure Number Variations can be found on page 29.

* Socket Weld dimensions shown; Consult factory for Butt Weld dimensions.

** End to end may vary.

Numbers shown in Black indicate dimensions in inches, weight in pounds. Numbers shown in blue indicate dimensions in mm, weights in kilograms.

Threaded end valves are nominal ASME B16.34 rated. Consult factory for other ratings.

NOTE: All weights are approximate for shipping purposes only. Information on Figure Number Variations can be found on page 29.

Throttling Valve

Pressure Class

Full ASME rated through 3045. Higher intermediate and limited class ratings are available. Consult factory.

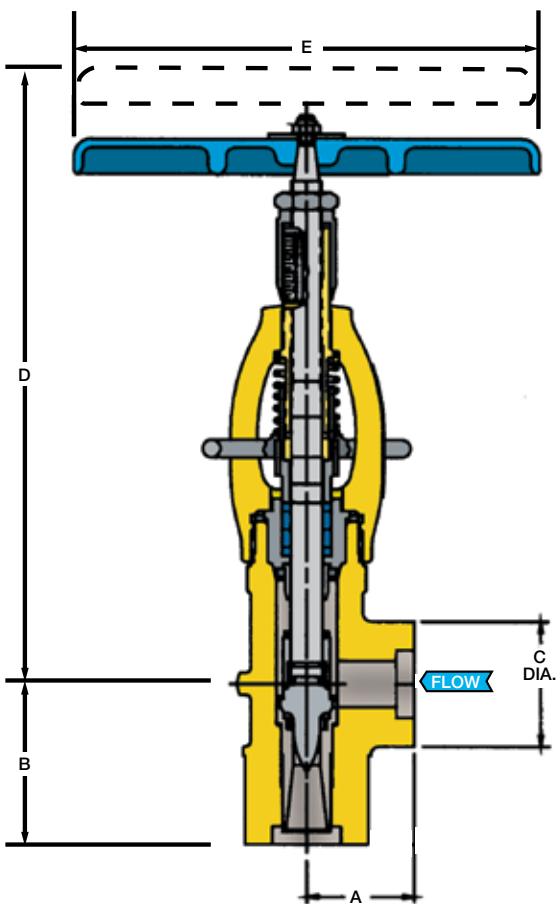

Features

- Replaceable 440C SS Seat/Venturi
- Low Velocity Across the Main Seat
- Precise Flow Control
- Position Indicator
- Pressure Seal Bonnet
- Superior Control Micrometer Dial
- Ease of Actuation:
Air Motor Hydraulic

To Specify

1.) Use "U" as the valve design modifier in the figure number. (e.g. 1.50-13U2J-F22)

2.) Indicate orifice size or inlet pressure and temperature and required maximum flow.

Numbers shown in black indicate dimensions in inches/Cv. Numbers shown in blue indicate dimensions in mm/Kv.

See product brochure for more details.

Camseal® Cartridge-style, Top Entry Zero Leakage Ball Valves save significant time and money on installation, maintenance, replacement and downtime.

See product brochure for more details.

DESIGN FEATURES

Conval Camseal Ball Valve Provides Zero Leakage

Zero Body Leakage: The body/bonnet joint is not subject to pipeline stresses. There is no in-line body bolting to loosen and fatigue, so the body remains leak-free.

Zero Seat Leakage: All valves are capable of meeting zero bubbles for 4 minutes @ 50 psi and 1,000 psi Nitrogen at final factory hydrotest, after field in-line welding, following post-weld heat treat, during and after process thermal excursions including thermal shocks. Modular internals isolate critical seal surfaces from thermal effects..

Zero Stem Seal Leakage: Conval's exclusive Integral Gland Wrench concentrically loads the stem packing without tools, eliminating stem leaks and extending packing life. Live loading is available as an option.

Cartridge-style Top Entry

With top entry access, maintenance and replacement of the cartridge internals are very convenient, with no effect on existing piping and welds. A window shows the exact position of the ball when actuated.

Robust Stem-Ball Engagement

Reliable, accurate ball alignment is achieved due to the robust engagement between the one-piece stem and the ball.

Superior Bearing Support

Superior bearing support of the blowout-proof stem ensures proper axial alignment and Zero Seat Leakage even on actuated valves.

Chrome Carbide Coating System

Conval's highly-engineered flame spray Chrome Carbide coating system has superior bond

strength and coating density to provide long-life, leak-free performance even in high pressure drop applications.

In-line Servicing

In-line renewability can be accomplished in 30 minutes and restores Zero Leakage performance in the event of process application abuse.

Integral Mounting Pad

An ISO-5211 integral mounting pad facilitates error-free, air, motor and gear operator actuation due to superior rigidity, precise alignment and a fully-guided stem bearing system. Lockout capability is standard.

Two-Year Warranty

Conval is committed to unsurpassed quality. We are so confident of the quality of our product, that we offer a two-year warranty.

STANDARD SIZES

1/2" through 4" Top Entry
SW, BW, FNPT and a variety of ends

PRESSURE RATING

ASME Class 900 through 4500

STANDARD MATERIALS

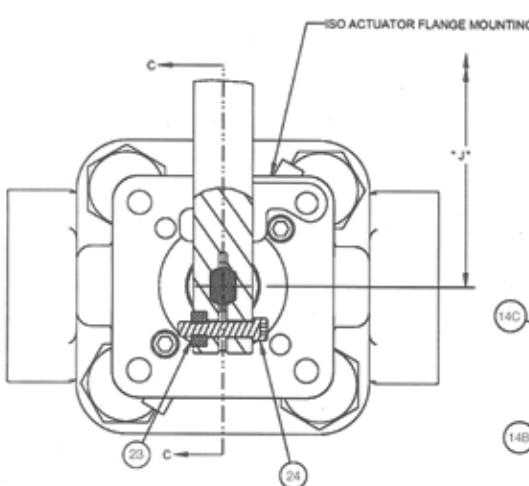

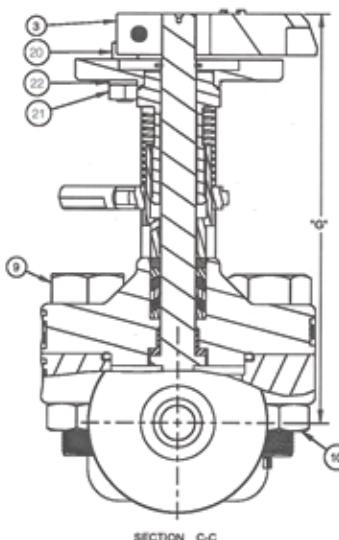

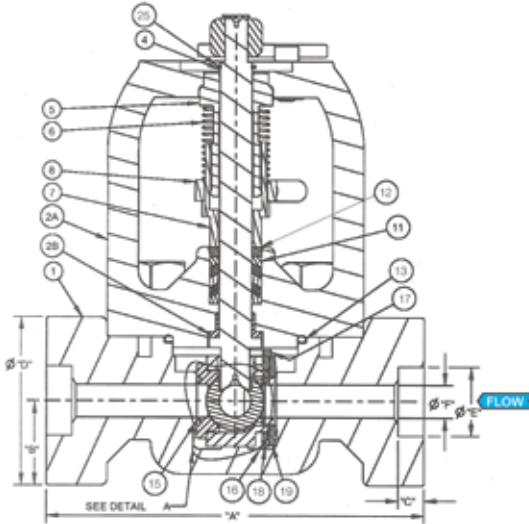

Carbon Steel SA-105
Stainless Steel SA-182-F316/F316L
Alloy SA-182-F22 Cl.3, SA-182-F91

CLAMPSEAL SWIVLDISC GATE VALVE

- Integral Gland Wrench
- In Line Repairable
- Adaptable for Air or Motor Actuators

The Conval CLAMPSEAL® Swivldisc Gate Valve delivers performance at the standard set by the legendary CLAMPSEAL® Globe Valve.

The Swivldisc wedge gate design employs a flexible disc face which permits the seating surfaces to achieve perfect alignment, establishing a leak tight seal not possible with standard wedge gates.

The simple and effective CLAMPSEAL® pressure seal bonnet provides ready access for servicing with no welds to cut or seal rings or gaskets to replace. The body-to-bonnet joint integrity is maintained through countless thermal cycles.

The Conval packing system delivers the best performance available. The one-piece gland with integral gland wrench is readily adjustable at anytime. Repacking can be accomplished by swapping the bonnet-chamber with the fresh pre-packed unit. The fine finish of the stem and chamber combines with high performance graphite packing to ensure long packing service life.

Selection of the CLAMPSEAL® Swivldisc is a commitment to quality and best value.

Conval's Swivldisc is the gate valve of choice when performance must be assured in the most demanding services.

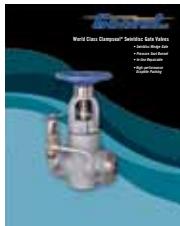

Based on real-life experience, more HRSG maintenance supervisors and planners are choosing to replace original lower-quality, foreign-made valves with new Conval valves, including Swivldisc gate valves. If the original valves are actuated, Conval can match the footprint of the actuator for easy replacement.

Swivldisc Gate Valve with bypass

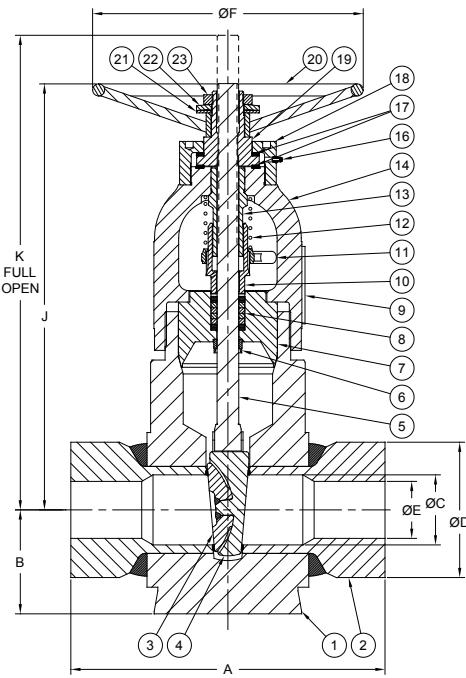

- **Swivldisc gate**
- **Pressure Seal Bonnet**
- **High Performance Graphite Packing**
- **One Piece Gland**
- **Unobstructed, Full Port Flow**

Strainers

The CLAMPSEAL® design is available in a variety of in-line strainer configurations. Supplied as either a simple strainer with blowoff socket connection or strainer with integral blowoff valve, the CLAMPSEAL® is easily disassembled for element cleaning or changeout. The CLAMPSEAL® offers a versatile economical alternative for strainer requirements.

CLAMPSEAL® Strainer

Specifications:

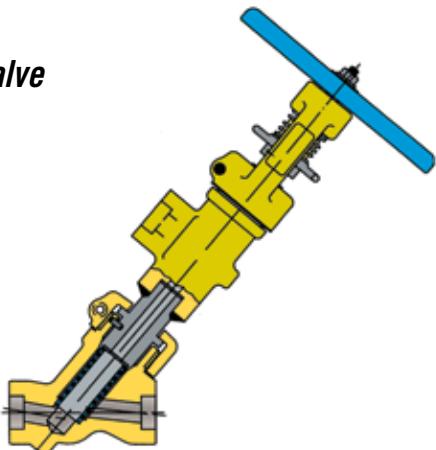

Size:	1/2"	- 4"
Class:	600	- 4500
Material:	SA	105
	SA	182-F22
	SA	182-F91
	SA	182-F316

Standard Strainer

Element Hole Sizes: 1/32, 3/64, 1/16, 3/32, 1/8

Options: Mesh Lined Strainer Elements

Example: 0.75-11Y4-F22

CLAMPSEAL® Strainer W/Blowoff Valve

Specifications:

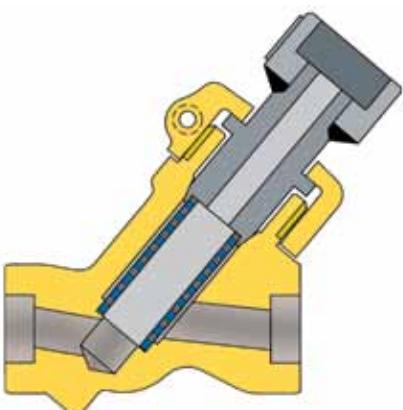

Size:	1/2"	- 4"
Class:	600	- 4500
Material:	SA	105
	SA	182-F22
	SA	182-F91
	SA	182-F316

Standard Strainer

Element Hole Sizes: 1/32, 3/64, 1/16, 3/32, 1/8

Options: Mesh Lined Strainer Elements

Example: 0.50-13W2J-316

CLAMPSEAL® Strainer w/Blowoff Fitting

Specifications:

Size:	1/2"	- 4"
Class:	600	- 4500
Material:	SA	105
	SA	182-F22
	SA	182-F91
	SA	182-F316

Standard Strainer

Element Hole Sizes: 1/32, 3/64, 1/16, 3/32, 1/8

Options: Mesh Lined Strainer Elements

Example: 0.50-13X2-316

Blowoff bonnet enables use of any CLAMPSEAL® Valve as a flush point.

Whisperjets

High pressure drops can introduce severe erosion and wear. The Conval Whisperjet receives the high pressure inlet stream and discharges it through a series of multi pressure reduction stages called Whisperjets. Each Whisperjet section has four or six orifices around its perimeter. The orifices discharge inwardly, allowing the flow streams to impinge on each other rather than on the valve or sections themselves. These Whisperjets are designed to prevent sonic flow and critical pressure drops from occurring. By reducing the pressure in stages, cavitation, erosion, fluid velocity and sound level are minimized.

Many power plants have replaced competitors' pump recirculation control valves with Conval valves equipped with custom-engineered Whisperjets. Why?

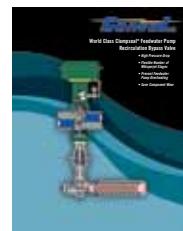

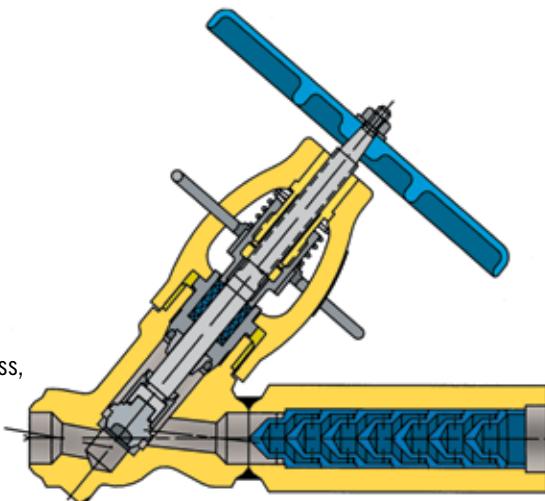

Because the competitor valves' control velocity type trim limited mass flow and was causing the feed pumps to overheat. Today, the Clampseal/Whisperjet valves are still operating flawlessly and are regarded as excellent, reliable products in what all agree is a difficult situation.

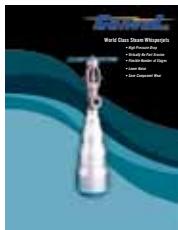

Water

Specifications:

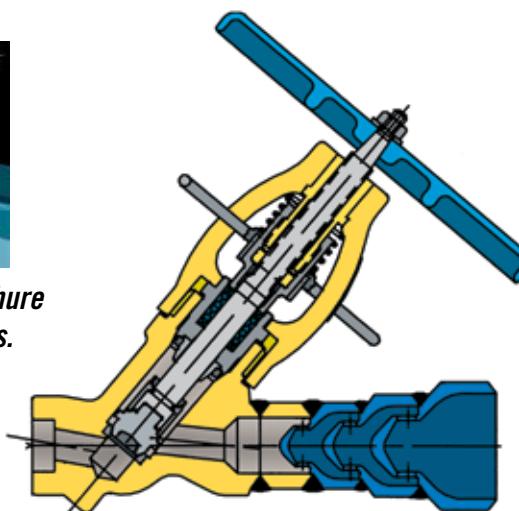

Type:	Angle, Y or T-pattern
Size:	1/2" thru 12"
Class:	ASME to 4500
End:	Socket Weld, Butt Weld
Material:	SA 182-F22, SA 182-F91, SA 105
Actuation:	Air, Motor, Manual
Applications:	Feedwater Pump Recirculation Bypass, Steel Mill Descaling Processes
Example:	1.00-22G2J-105

**See product brochure

Size:	1/2" thru 12"
Class:	ASME to 4500
End:	Socket Weld, Butt Weld
Material:	SA 182-F22, SA 182-F91, SA 105
Actuation:	Air, Motor, Manual
Applications:	Blowdown, Flash Tank Protection,Vents
Example:	1.50-23G2J-F22

Whisperjets provide for the progressive increase in specific volume as pressure drops.

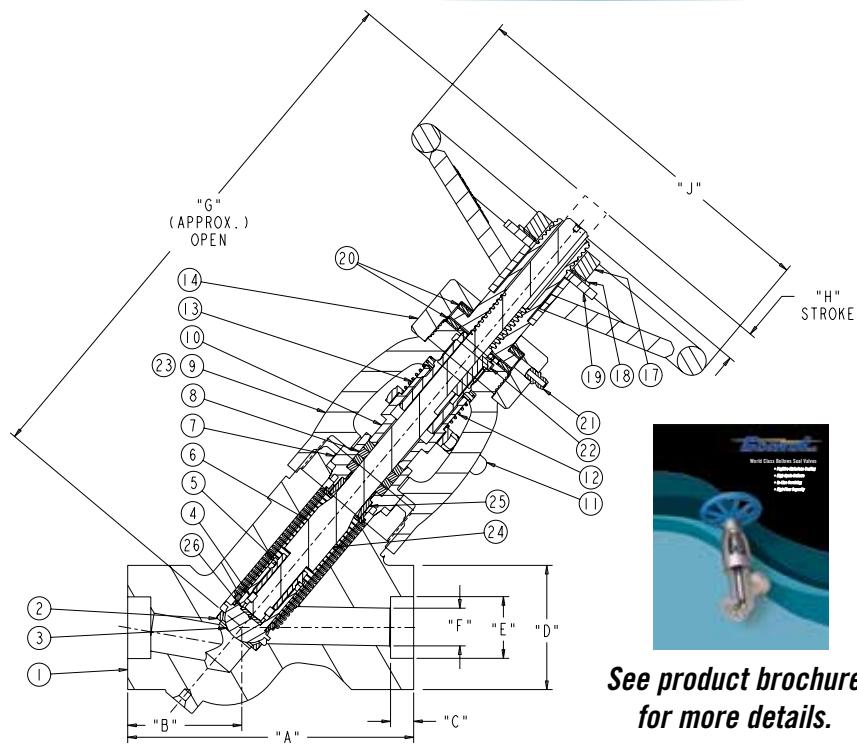

Bellows Seal Valve

Packed valves require two different seals: a 360° seal on the stem and a 360° seal on the stuffing box. The Conval Bellows Seal Valve removes these two leak paths.

Conval Bellows Seal Valves are used when packed valves may not reliably contain light gases or hazardous system fluids. The multi-ply Inconel™ static bellows stem seal is more reliable in most applications than sliding stem seals.

Conval Bellows Seal Valves have two back-up stem seals, a graphite packing and a pressure actuated backseat to contain system fluids in the unlikely event of a Bellows rupture.

Meets all the requirements of MSS-SP117.

Special Application Valves

The CLAMPSEAL® design is uniquely suited to a number of special applications where service demands require rugged construction while retaining easy in-line serviceability. No other forged valve offers this variety of applications.

Tandem Blowdown

Traditional bottom blowdown service requires a tandem valve. Unlike older massive designs with limited serviceability, the CLAMPSEAL® unit tandem valve offers compactness, lighter weight and easy maintainability as well as longevity of service.

Specifications:

Size/Style:	1" - 2 1/2"	Material:	SA 105
Class:	ASME to 4500		SA 182-F22
End:	Socket Weld, Butt Weld, Clamp Connector	Example:	1.00-12B8HJ-105

Cryogenic Service

High pressure cryogenic service demands special attention to design and quality of material and fabrication. The CLAMPSEAL® delivers tight shutoff and operability through a wide temperature range and meets ANSI B 31.3 requirements.

Specifications:

Size:	1/2" - 4"	Temperature:	To -320°F
Class:	ASME 1500 and 2500	Material:	SA 182-316
		Example:	1.00-12J2J-316

Fire-Safe Service

Fire-safe service is ideal for refining and chemical plants where fire safety is a major concern. CLAMPSEAL® globe valves may be retrofitted with this fire-safe capability, which meets API Standard 6FA.

Specifications:

Size:	1/2" - 4"	Material:	A105, F22, F91, F316, F347,
Class:	ASME/ANSI Class 900-2500		Inconel, Monel
Temp.	To 1800°F	Example:	1.50-13C8J-A105

Three-Way Service

Conval has responded to the need for a high pressure, high temperature 3-way valve with easy serviceability for both seats. Excellent service history and versatility make the CLAMPSEAL® valve the choice for 3-way service.

Specifications:

Size:	1 1/2" - 3"	Material:	Carbon Steel: (WCB)
Class:	ASME to 2500		Low Alloy: (WC9)
End:	Socket Weld, Butt Weld, Flanged, Clamp Connector		Stainless: (CF8M)
		Example:	1.50-13Z4J-316

Special Application Valves

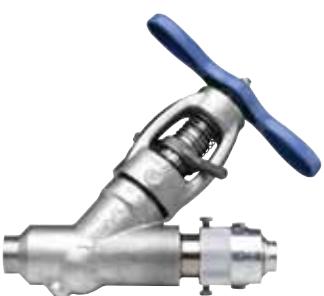

Naval Boiler Blowdown

The CLAMPSEAL® Naval Boiler Blowdown valve meets the requirements of MIL-V-17737 and other applicable specifications.

Specifications:

Size:	1 1/2"
Type:	I (Handwheel) or II (T-handle)
Class:	1 (600 lb) or 2 (1500 lb)
Style:	Straightaway (Y) or Angle

Material:	Carbon Steel or Alloy Steel
Example:	1.50-12G8CJ-N05
NSN:	4820-01-124-3694,
	4820-01-140-4834
	4820-01-018-3780,
	4820-01-018-3781

SaVD Series Safe Vent Drain

Now you can add a simple, single-weld, dual sealing system to Clampseal Y-pattern valves to enhance leak-free performance and allow for fast, safe, environmentally-friendly venting and draining of piping systems.

Specifications:

Size:	1/2" - 2"
Type:	Y-Pattern; NPT, BW, SW Ends
Class:	Thru ASME 2500#

Material:	Stainless Steel A479-F316, A105, F22 and other materials upon request.
Options:	Securing Chain, Rodable Cap

Urea Service

Urea Service is designed for high-pressure piping of urea reactors, strippers and condensers. Ideal for use with ammonium carbonate, nitric acid, and urea process fluids.

Specifications:

Size:	1/2" - 4"
Type:	Y-Pattern; NPT, BW, SW Ends
Class:	ASME Class 900-2500

Material:	Forged Stainless Steel
Example:	2.00-12A0Z-252

Actuators

Conval CLAMPSEAL® valves are easily adapted to electric motor or pneumatic actuation. Valves ordered with actuators are assembled, functionally tested at Conval and shipped ready for installation. Where customers have existing actuators, the CLAMPSEAL® valve is provided with appropriate yoke flange and stem adaptor. All actuated valves are furnished with an integral gland wrench.

Electric Motor Actuated

Specifications:

Size:	1/2" - 4"
Class:	thru 4500
Material:	SA 105 SA 182-F22 SA 182-F91 SA 182-F316

Actuator:

Limitorque
Rotork
EIM
AUMA
Local Position Indicator

Pneumatic Actuated

Specifications:

Size:	1/2" - 4"
Class:	thru 4500
Material:	SA 105 SA 182-F22 SA 182-F91 SA 182-F316

Actuator:

Fisher
Copes-Vulcan
Valtek
Fail Open/Fail Closed
Manual Override
Limit Switches
AC or DC Solenoid

See Page 29 for Figure Number OPTION selection

World Class Clampseal® and Camseal® Automated Valves

- *Automate Precise Closure*
- *Eliminate Excessive Steam Dumping*
- *Reduce Treated Water Replacement*
- *Monitor and Control Remotely*
- *Extend Product Life*
- *Reduce Labor Costs*

*See product brochure
for more details.*

Automated Valves

DESIGN FEATURES

Automates Closure

Significant savings in labor costs are realized by fully automating the operation of the valves. Automated closure also assures consistent, precise closure. Actuators will apply the proper force to close valves every time, for tight shut-off and long valve life.

Saves Steam

Any number of valves can be opened or closed at one time, to eliminate excessive steam dumping.

Reduces Treated Water Replacement

With automated vents and drains, there is less of a need to replace treated water, as less steam or water is evacuated from the system.

Evacuates Condensate

Steam trap condensate evacuation is accomplished by programming the open/close cycle on regular intervals to suit the application. Fully automated sensing and draining of condensate can be offered if required.

Signals Open/Closed Position in Control Room

Automated valves can be easily instrumented for control room indication.

Integrates with Computerized Plant Operations

The process can be fully automated and integrated with plant hardware/software.

Actuated Clampseal® Globe Valves

Automated globe valves are available in angle, Y, and T-pattern configurations. Valves are repairable in-line, with no welds to remove and replace. A complete line of tools for repair are available. Seats may be cut, ground and lapped. Disc can be turned or replaced, and lapped to the seat. Valves can be programmed to close, partially open, then close for seat cleansing, assuring tight shut-off. Thermal growth is accommodated by the air actuator and by an optional spring pack with the electric actuator.

Actuated Camseal® Ball Valves

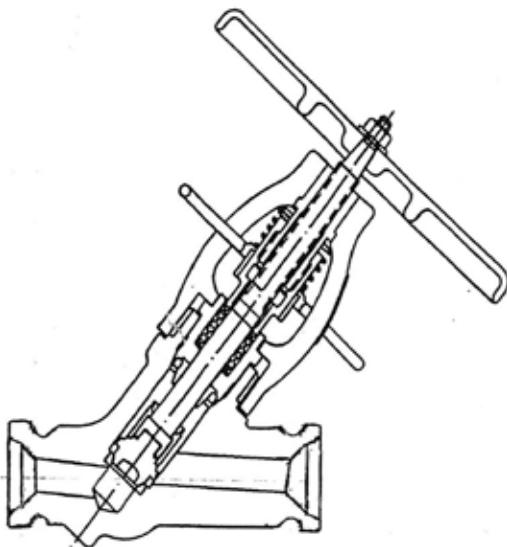

Top entry ball valves feature in-line replaceable cartridge. Cartridge with new seat and ball is fully factory-tested to assure tight shut-off. Valve has indicator window and marked stem, to assure proper in-line ball alignment in open and closed positions. Integral ISO mounting flange supplied as standard.

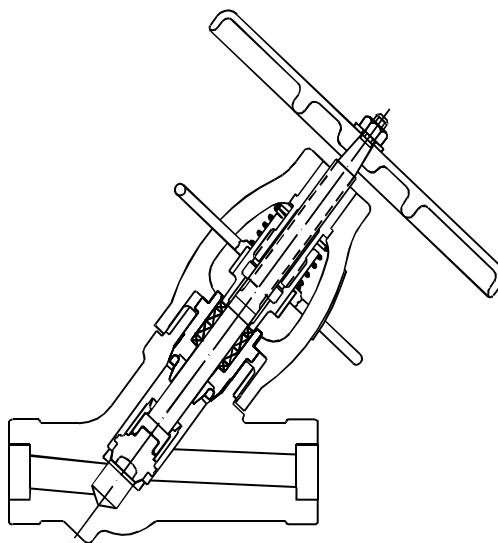

Globe and ball valves are available with air or electric actuation. Conval also offers air actuators with direct mount for solenoids.

CLAMPSEAL® Extended End Valve & Clamp Connector Ends

Whenever replacements of any manufacturer's Y-Pattern valve are made, Conval now provides a couple of options to simplify the replacement. Depending upon the particular replacement needs, Conval can supply an Extended Body Valve or a Valve with Extensions. Under normal circumstances, the Extended Body Valve will have sufficient end-to-end length to allow replacement of an existing valve without adding material. If further end-to-end length is required, the Valve with Extensions would be recommended.

Clamp Connector End

Extended Y-Pattern Body Valve

Socket Weld shown, Butt Weld also available

Conval Tool Kits

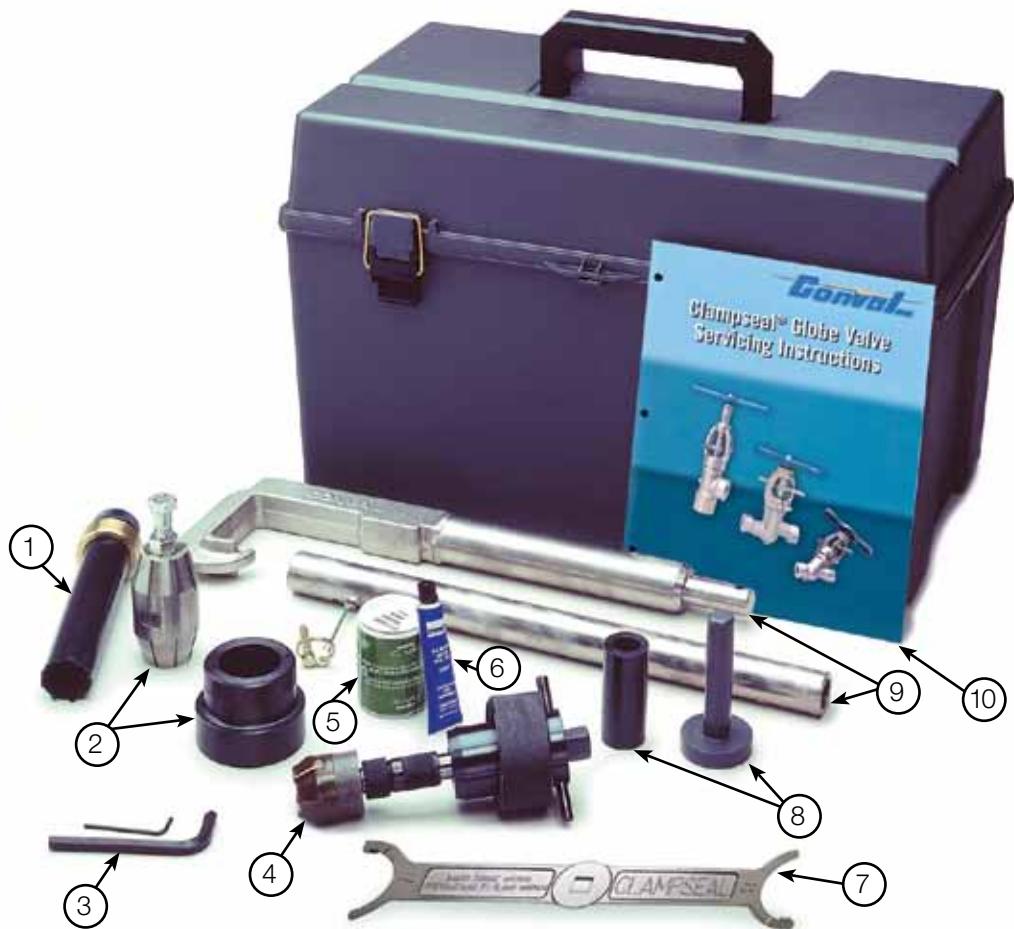

CLAMPSEAL® valves are designed to provide years of dependable service and to allow rapid in-line repair. Quick disconnect yoke and bonnet design provide fast access to valve trim for inspection and repair.

Conval's seat refacing tools cut through all types of seat damage leaving a smooth seat finish in minutes. Solid seats allow for repeated resurfacing.

Typical repair operations can be completed in under one hour making repair much more economical than replacement.

Conval's Tool Kits consist of:

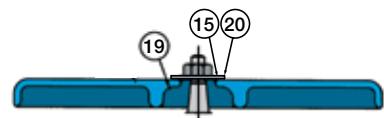

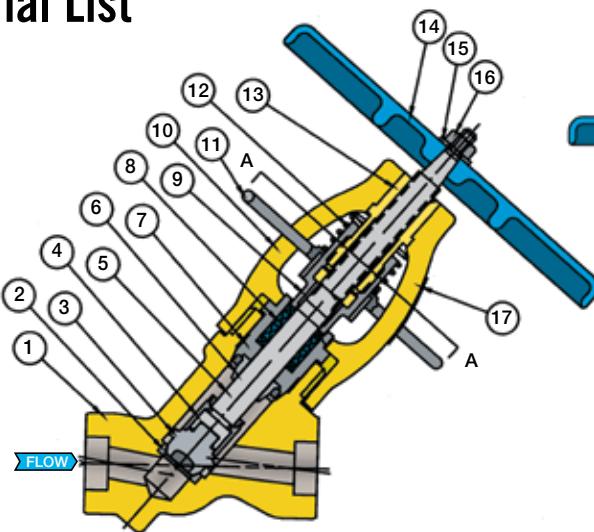

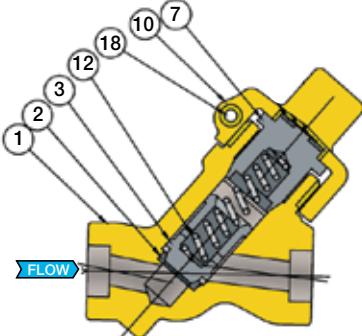

- 1 Disk to Seat Mate Lapping Tool
- 2 Bonnet Lapping Tool
- 3 (2) Allen Wrenches
- 4 Seat Refacing Tool
- 5 Lapping Compound
- 6 High Spot Blue No. 107
- 7 Gland Wrench
- 8 Repacking Tool
- 9 Yoke Wrench
- 10 Servicing Instructions

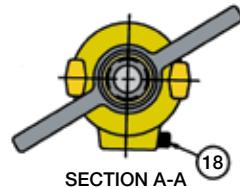

Servicing Instruction videos are available on CD or DVD and online at Conval.com.

A Typical Conval Tool Kit

Standard Parts & Material List

Impact Handle/Handwheel
used on size codes 8G to 10M

ABOVE 620 °C IS LIMITED TO MAXIMUM OUTSIDE DIAMETERS OF 88.9MM

1 REFER TO CLASS DESCRIPTIONS FOR OTHER APPLICATIONS.

2 SOCKET WELD SIZES DO NOT GO OVER 2 1/2"

3 NDE IS REQUIRED FOR SPECIAL CLASS RATINGS.

FLANGED, THREADED, AND GATE VALVES ARE NOMINALLY RATED.

FLANGED END VALVES MAY ONLY BE STANDARD CLASS, AND NOMINALLY RATED.

THREADED END VALVE RATINGS TERMINATE AT 538 °C AND AT PN420 CLASS.

BASED ON ASME B16.34-2013 APPENDIX VII TABLES, AND WHERE APPLICABLE V-2.1.3 OF APPENDIX V

ASME Class and Ratings

ASME B16.34 incorporates socket weld end valves and butt weld end valves with Limited Class ratings. Conval offers the industry's finest forged steel globe valve with the highest ratings available. ASME Limited Class Rating applies to 2 1/2" and smaller valves only and allows use of ASME Special Class Tables without NDE.

Standard Class

Standard class is a general use classification which uses the ASME Standard Class pressure temperature tables from B16.34. No NDE or special analysis is required. Standard Class provides the lowest (most conservative) ratings.

- Application: Socket Weld, Butt Weld, Threaded End & Flanged valves (Flanged and Threaded End ratings terminate at 1000°F).
 - NPS 1/2 to 4"
 - No NDE Required
- Valve Marking: B16.34 STD

Limited Class

Limited class is a rating which allows small (NPS 2 1/2" or smaller) socket weld valves to be rated to the higher ASME Special Class pressure-temperature tables as well as Annex G from B16.34.

No NDE is required but special engineering analysis must be completed prior to assigning this rating (This has been completed for all CLAMPSEAL® valves). Limited Class provides ratings which are much higher than Standard Class, and in some cases above 900°F are slightly higher than Special Class ratings.

- Application: Socket Weld and Butt Weld End Valves
 - NPS 1/2 to 2 1/2"
 - No NDE Required
- Valve Marking: B16.34 LTD

Special Class

Special class ratings using the tables from ASME B16.34 can be applied to any forged steel valve.

- Application: Socket Weld, Butt Weld, and Threaded End valves
 - NPS 1/2 to 4"
- NDE Requirements Body and Bonnet:
 - Volumetric Exam: Radiographic or Ultrasonic Testing
 - Surface Exam: Liquid Penetrant or Magnetic Particle
- Valve Marking: B16.34 SPL

Nominal Ratings

The ASME B16.34 tables list nominal ratings, i.e., 1500, 2500, 4500. The actual class number (1500) leads to a table or graph of pressure-temperature rating pairs.

To meet nominal rating requirements, valves must satisfy certain wall and hub thickness requirements which are derived from the maximum stress allowed in a given material. These requirements have been met for all CLAMPSEAL® valves.

CLAMPSEAL® valves which exceed the wall thickness requirements may use the excess wall thickness to increase their service rating. These enhanced ratings are called intermediate ratings. Interpolating between the wall required for a class 1500 and a class 2500 valve allows Conval to intermediate rate its 1500 nominal valves to 2155.

Example: an F22 ASME 2155 LTD valve is rated for 1086 PSIG at 1100°F but only 550 PSIG for 1500 Standard class.

Standard, Limited, or Special Class valves may be rated to either Nominal or Intermediate Ratings.

Ball valves, Gate Valves and Threaded End Valves are nominal ASME B16.34 rated. Consult factory for other ratings.

Note: Flanged valves may not be intermediate rated. Maximum flanged and threaded valve rating is 2500.

Applications

- The modular design of the Clampseal valve family allows for easy customization to provide a wide range of special materials, design options and accessories to match your service requirements.
- Valve configurations are available for many plants and applications including those listed here:
 - Fossil power
 - Nuclear power
 - Refineries
 - Petro chemical plants
 - Chemical plants
 - Gas separation
 - Pulp and paper plants
 - Recovery boilers
 - Marine boilers
 - Cryogenic systems
 - Oil patch steam injection
 - Thin gas service
 - Water treatment
 - Hydraulic systems
- Conval's QA program ensures that every component receives the same control as our ASME III nuclear equipment.
- Each order is reviewed by sales engineers to ensure compatibility with your application.
- Main Steam Lines
- Instrumentation
- Vents
- Drains
- Boiler Drums
- Superheaters—Steam Header
- Desuperheaters
- Turbine Generators
- Compressors
- Steam Condensers
- Chemical Fuel Lines
- Economizer
- Gauge Shut-off
- Blow-down (Continuous)
- Reheater – Inlet Header Drain
- Reheater – Outlet Header Drain
- Auxiliary Steam Main
- Water Column Shut-off
- Water Sampling
- Steam Sampling
- Steam Gauge Test
- Test Loop

The Conval Story

In 1962, Mr. Chester Siver completed designs for a revolutionary line of high-pressure, forged steel valves. Hamilton Standard (now Hamilton Sunstrand), a division of United Technologies Corporation, was asked to use their then-new Electron Beam Welding technology for joining of parts into valves for subassemblies. Hamilton Standard became intrigued with the valve as an ideal application of the Electron Beam Welding technique, and negotiated a contract for the rights to manufacture and sell the valve. Mr. Siver served as manager of the valve project.

The first CLAMPSEAL® valves were introduced to the market by Hamilton Standard in 1964. However, in the mid-1960's, growing demand for the firm's popular aerospace products forced Hamilton Standard to make the decision to abandon its industrial products projects. The rights to the CLAMPSEAL valve reverted back to Mr. Siver. Since CLAMPSEAL valves were born in Connecticut, Mr. Siver founded "Conval" (short for Connecticut Valve) in 1967. Today, the valves are still manufactured in Connecticut, a state with a longstanding reputation for technological innovation and manufacturing excellence.

Conval has grown into a leader in valves for the world's most demanding applications. We have a global team of experts to help to meet your most challenging needs. We invite you to contact us today.

High-pressure, high-temperature ball, bellows, bonnetless, check, gate, globe, throttling, and urea service valves for the world's most demanding applications.

Celebrating over 45 years of excellence!

Thank you for your business.
